

HIDRO H Standard pumping stations

HD-NR technology

The shaft is a prefabricated tank, made of polypropylene sheet with welding, or of welded polyethylene. This solution is environment protecting, perfectly watertight, installable easily. The technologic unit is assembled of metal and/or plastic parts. Its task is to convey the sewage, to fix the pump and to make a fast coupling possible in the pumping station. The pump is a turbine pump of different hydraulic construction. The level control can be fixed separately and free adjustable. The pump is started and stopped by a floating level switch.
